DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 34-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vlasich 5,048,727 in view of Czaplinski et al. 3,709,365.

Vlasich discloses a pharmaceutical package as seen in figure 1, which comprises a closed polypropylene bottle/barrel (12) in which is disposed a solution (15), the solution comprises a pharmaceutical product (col. 2, II. 57-64), wherein the solution does not fill the bottle completely and some air is disposed in the bottle (col. 3, II. 34-39). Vlasich lacks after autoclaving the package at at least 121°C and for at least 20 minutes, suffers no deformation, does not shrink, and does not explode and where the package retains a sufficiently high squeezability to dispense the solution. Czaplinski et al. teach the use of autoclaving a polypropylene material at about 115°-125°C. from 20-30 minutes (col. 2, II. 49-58).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Vlasich's package by autoclaving the package, as taught by Czaplinski et al. in (col. 2, II. 49-58), in order to treat a material that can withstand autoclaving at a temperature 121°C for at least 20 minutes.

As to claim 41, lines 1-3, the claimed subject matter "wherein physical properties of said polypropylene meet requirements laid down in the supplement of 1998 of the European Pharmacopoeia, 3rd edition (1997).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Vlasich's package as such, in order to comply with the requirements of the European Pharmacopoeia, 3rd edition (1997), as such is notoriously well known in the art.

With respect to claim 35, Vlasich discloses that the package further comprises a plastic nozzle tip (14) for dispensing the solution and a cap (17) for closing the bottle, wherein the bottle has walls that have a wall-thickness as seen in Figures 1-2.

With respect to claim 36, Vlasich discloses that the bottle comprises a neck portion (14b) that includes an externally threaded portion and an outer rim (19) which defines an outlet of the bottle, wherein the nozzle tip is in fluid contact with the outlet of the bottle as seen in Figure 2, wherein the nozzle tip has a dispensing pathway in fluid communication with an outlet, and wherein the cap has an internal threads for engagement with the externally threaded portion of the neck of the bottle (col. 4, II. 11-15 and as seen in Figure 1).

Application/Control Number: 09/973,256

Art Unit: 3754

As to claim 37, the claimed subject matter "the bottle is made of Appryl 3020 SM 3, the nozzle tip is made of Appryl 3020 SM 3, and the cap is made of HDPE GC 7260.

At the time the invention was made, It would have been an obvious matter of design choice to a person of ordinary skill in the art to have made Vlasich's bottle and nozzle tip of Appryl 3020 SM 3, and the cap of HDPE GC 7260, because applicant has not disclosed that the bottle is made of Appryl 3020 SM 3, the nozzle tip is made of Appryl 3020 SM 3, and the cap is made of HDPE GC 7260, provides an advantage, is used for a particular purpose, or solves a stated problem. One of ordinary skill in the art, furthermore, would have expected applicant's invention to perform equally well with Vlasich's bottle, nozzle tip and cap, because Vlasich's bottle, cap and nozzle tip form an enclosed container.

Therefore, it would have been an obvious matter of design choice to modify Vlasich's bottle, cap and nozzle tip to obtain the invention specified in claim (37).

With respect to claim 38, Vlasich discloses that the bottle has a bottom portion see Figure 1 for location, where the bottom portion of the bottle has a concave configuration as seen in Figure 1.

As to claim 39, the claimed subject matter, the bottle has a wall-thickness in the range of 0.3 mm to 0.6 mm, as well as the claimed subject matter in claim 40.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Vlasich's wall-thickness as such, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering

Art Unit: 3754

the optimum or workable ranges involves only routine skill in the art. As per MPEP 2144.05

As to claim 42, lines 1-3, the claimed subject matter "wherein physical properties of said polypropylene meet requirements laid down in the supplement of 1998 of the European Pharmacopoeia, 3rd edition (1997).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Vlasich's package as such, in order to comply with the requirements of the European Pharmacopoeia, 3rd edition (1997), as such is notoriously well known in the art.

Response to Arguments

3. Applicant's arguments filed 5/21/2004 have been fully considered but they are not persuasive. In response to applicant's argument that the combined cited references do not make obvious the claimed subject matter as defined in independent claim 34, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art.

See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Vlasich discloses a pharmaceutical package as seen in figure 1, which comprises a closed polypropylene bottle/barrel (12) in which is disposed a solution (15), the solution comprises a pharmaceutical product (col. 2, II. 57-64), wherein the solution does not fill the bottle

Application/Control Number: 09/973,256

Art Unit: 3754

completely and some air is disposed in the bottle (col. 3, II. 34-39). Vlasich lacks after autoclaving the package at at least 121°C and for at least 20 minutes, suffers no deformation, does not shrink, and does not explode and where the package retains a sufficiently high squeezability to dispense the solution. Czaplinski et al. teach the use of autoclaving a polypropylene material at about 115°-125°C, from 20-30 minutes (col. 2, II. 49-58). Therefore, one having ordinary skill in the art at the time the invention was made, would modify Vlasich's package by autoclaving the package, as taught by Czaplinski et al. in (col. 2, II. 49-58), in order to treat a material that can withstand autoclaving at a temperature 121°C for at least 20 minutes. Further, the test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See In re Keller, 642 F.2d 413, 208 USPQ 871 (CCPA 1981). Any remaining arguments have been fully addressed in the above rejection.

Conclusion

4. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Application/Control Number: 09/973,256

Art Unit: 3754

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
